Pretty glitchy, but its expected from an early access game. But it has a lot of potential and when it works properly it's pretty fun.. Can I recommend this game? No, not at all. The customization is absolutely minimal, only a few select parts, only a handful of colours, and the same goddamn route all over again, with unreliable traffic that just straight-up stops you dead in your tracks. It'd be better if it actually had something happen with the collision, actually had racing (since racing against the same u2665u2665u2665u2665u2665u2665 time, over and over again, is just very stupid), and actually had more maps and more customization. Rating? 3/10. It's lightly amusing but that's as far as it actually gets.. My 5 year old says "I don't like it because the car is controlling itself, but I do like the game. I want thumbs across.". Great little game! Can't wait for the full release.. Great little game! Can't wait for the full release.. Very bad game with bad acceleration and unexpected high graphic requirements.Also the music was just terrible.
